## DETAILED ACTION

### *Election/Restrictions*

#### **1. Restriction to one of the following inventions is required under 35 U.S.C. 121:**

- I. Claims 1, 3, 5-15, 22-24, drawn to a process of transforming a dicot plant, classified in class 800, subclass 278, for example.
- II. Claims 16 and 20 drawn to a transgenic plant, classified in class 435, subclass 419, for example.
- III. Claim 21 drawn to a method for producing seed of a transformed plant, classified in class 800, subclass 260, for example.

The inventions are distinct, each from the other because:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case transgenic plants may be produced by an alternate means, such as by using microprojectile bombardment.

Inventions I and II are unrelated to Invention III. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the inventions have different functions where Groups I and II are drawn to a process

of transforming a plant and the transgenic plant whereas Group III is drawn to a method of breeding. A method of breeding a transformed plant is unrelated to transforming a plant using electrophoresis. Breeding methods are drawn to sexual hybridization not encompassed by methods of electrophoretic transformation and require a completely different search than do methods of transformation. In addition, transformation requires the introduction of exogenous DNA not required in breeding methods.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art and by their recognized divergent subject matter and because the searches required for Groups I and II and III are distinct from each other, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).
